Bright Jasper

Software Engineer | hello@brightjasper.com | dev.brightjasper.com | github.com/Aura-pix | linkedin.com/in/bright-jasper-20a8223b3

Summary

Software engineer with 3 years of experience building full-stack web apps with React, Next.js, TypeScript, Node.js and PostgreSQL. Third-year Computer Science student at FUT Minna. I am the solo developer of Roomly, a student housing marketplace in beta with escrow payments, and I delivered a client e-commerce storefront in 24 hours. I use AI coding tools daily and review and test every change before it is committed. I can work US 9-to-5 hours depending on scope.

Experience

Backend Engineering Intern (Python) | Pulse, grid energy monitoring

- Built a GET /api/rtos endpoint backed by a BigQuery summary query function
- Moved queries from raw tables to the team's secured clean views
- Found a bug where training and test table values were swapped, and flagged a function defined four times in the codebase
- Worked in feature branches and opened pull requests for review

Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Solidity, PHP, SQL, HTML5, CSS3
- **Frontend:** React, Next.js, Tailwind CSS, custom hooks, responsive design
- **Backend and data:** Node.js, Express.js, REST APIs, Prisma ORM, PostgreSQL (Supabase), MySQL, BigQuery, JWT auth, bcrypt, webhooks, cron jobs, Google OAuth
- **Tools and hosting:** Git, GitHub, Vercel, Render, Cloudflare, Cloudinary, ZeptoMail, Sanity CMS
- **AI-assisted development:** Claude, ChatGPT, GitHub Copilot, Cursor, Blackbox, Devin, OpenCode models
- **AI workflow:** I delegate implementation to AI agents and keep configuration, architecture and decisions myself; I verify every output, reprompt where needed and approve every commit

- **SEO for developers:** technical audits, canonicals, sitemaps, schema, Core Web Vitals (Ahrefs, Google Search Console, GA4, Screaming Frog)

Projects

Roomly: student housing marketplace | Founder and full-stack developer | roomly.com.ng | github.com/Aura-pix/Roomly

- Built the platform end to end with a Next.js frontend and an Express.js API (controllers, middleware, services) using Prisma ORM on PostgreSQL (Supabase): property search, booking flow, caretaker onboarding, listings and withdrawals
- Implemented JWT authentication with refresh tokens, bcrypt password hashing, role-based access (student, caretaker, admin), email verification, frontend and backend form validation, rate limiting and Google OAuth
- Wrote reusable React hooks for data loading, loading states and empty states; replaced raw JSON error output with user-friendly messages; added 404 handling; tested responsive layouts with Chrome DevTools
- Used Cloudinary to optimize uploaded images and manage storage; sent transactional email with ZeptoMail; kept secrets in environment variables
- Integrated Monnify payments with escrow, a 24-hour refund window and webhooks, plus publicly verifiable receipts; scheduled cron jobs for data cleanup
- Fixed CORS and redirect issues with Cloudflare rules; managed blog content with Sanity CMS; deployed the backend on Render after migrating from Railway
- Found and fixed escrow and payout bugs: a release job that filtered by the wrong date, caution fees missing from caretaker payouts and duplicate bookings on expired reservations; added a 20-minute first come first served unit lock and OTP-verified withdrawals

Noel's Essentials: client storefront | Developer | noelessentials.com.ng | github.com/Aura-pix/noels-essentials-repo

- Built and delivered a Next.js e-commerce storefront for a registered Nigerian natural-products brand within 24 hours
- Implemented product size selection, a cart and a WhatsApp wholesale enquiry flow, with responsive layouts across devices

brightjasper.com: portfolio and SEO case study | Developer and site owner | github.com/Aura-pix/bright-jasper

- Built the site with Next.js and deployed it on Vercel, with a 308 redirect migration from its vercel.app address to a custom domain
- Fixed canonical, sitemap and metadata issues to take Ahrefs site health from 33% to 100% in 2 days and into a Google AI Overview by day 3

Flash loan arbitrage bot | Developer | github.com/Aura-pix/flash-loan-arb-bot

- Built a flash loan arbitrage bot with smart contracts and an off-chain bot, deployed and verified on the Sepolia testnet
- Used Balancer V2 flash loans with a Solidity contract built on Hardhat, and wrote an automated test suite covering reentrancy, trade direction, slippage and repayment checks

Library management system | Group leader | School project | github.com/Aura-pix/group-two-lms

- Led a team building a library management site in PHP and MySQL to apply our web development coursework, and presented it at school
- Implemented all four CRUD operations and search, using phpMyAdmin and mysqli prepared statements to guard against SQL injection
- Built signup, login and token-based session management following password-length and authentication best practices

Education

B.Tech, Computer Science | Federal University of Technology, Minna, Nigeria | 300 Level

Self-study

Self-taught through YouTube, online courses and CS coursework. Courses: supersimple.dev JavaScript and React; Bro Code JavaScript and Python (completed); several Udemy courses.

Certifications

- HubSpot AEO Fundamentals
- Ahrefs certified
- Google Analytics 4 certified

Development practice

- Review and test every feature before committing
- No AI agent commits or pushes without my approval
- Version control with Git and GitHub on every project
